making networks manageable

10 April 2012

→ Mancala Networks

The challenge

The solution: Network Controller

Architecture

Demonstration

- Privately owned French SAS
- Headquarters: Grenoble, France
- Mission: Develop innovative network monitoring & control solutions for Enterprises & Managed Security Service Providers (MSSPs)
- Seasoned Executive & Technical team
- Experience developing mission critical systems: SITA, Thales, BT roaming platform (CSL), ...

Mancala Networks

The challenge

Solution: Network Controller

Architecture

Demonstration

The modern enterprise network

is a

**complex
jungle**

Mancala Networks develops software solutions that boost the security of enterprise networks

The **Mancala Network Controller** provides continuous network monitoring and control to protect the enterprise against unseen threats

Real-time visibility and control delivers:

- > A more robust, more secure corporate network
- > Continuous compliance with security policies aligned with your business objectives

80% of attacks with financial impact come from the internal network

Computer Security Institute, 2011

Tens of millions of HP LaserJet printers vulnerable to remote hacking

ARTICLE

Rogue devices behind majority of attacks, study shows

Bill Brenner, Senior News Writer
Published: 5 Sep 2006

Security trust model evolution

Focus has been on protecting the network from the outside

Leaving the inside either locked or poorly controlled

15% to 25% of devices are not managed
Sophos, IDC, 2011

Today's ongoing revolutions exacerbate the problem

By 2015, the number of connected devices will be 15 billion
Cisco VNI Forecast 2011

Sensors

B.Y.O.D.

95% of information workers use at least one self-purchased device at work
IDC, 2011

Enterprises must take back **control** over their networks!

A large gap exists between the perceived and actual security state of the network

Threats are obscured by a rapidly changing, complex environment.

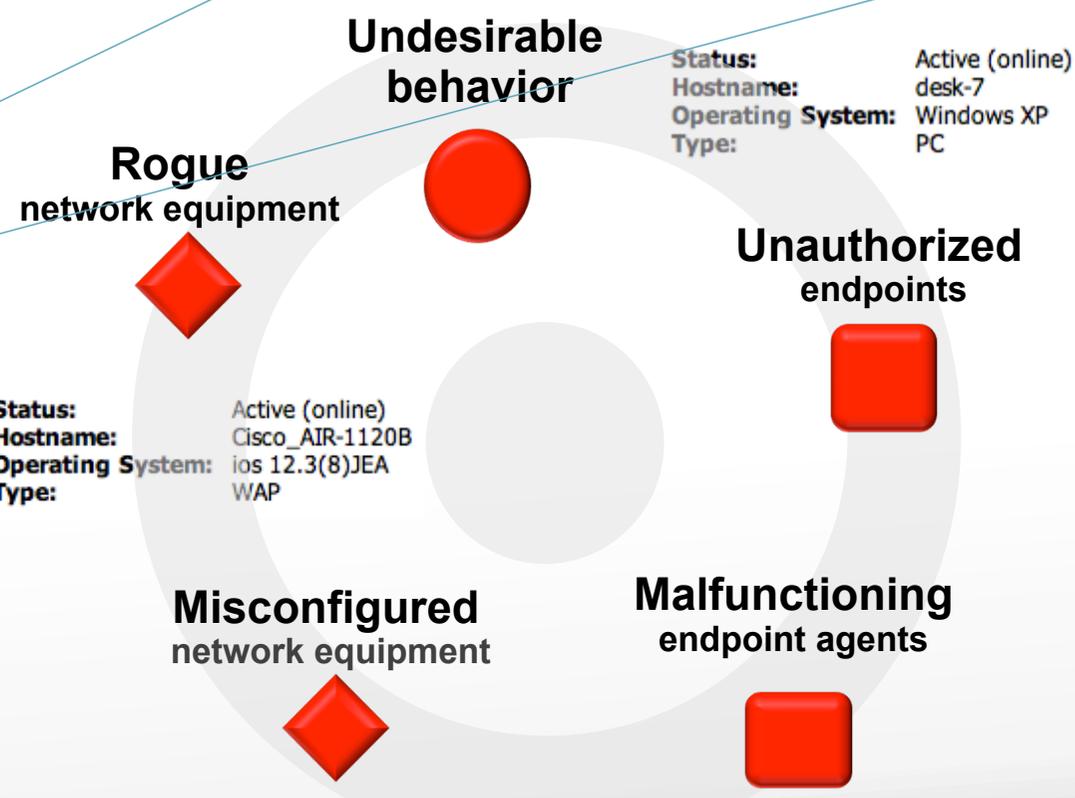

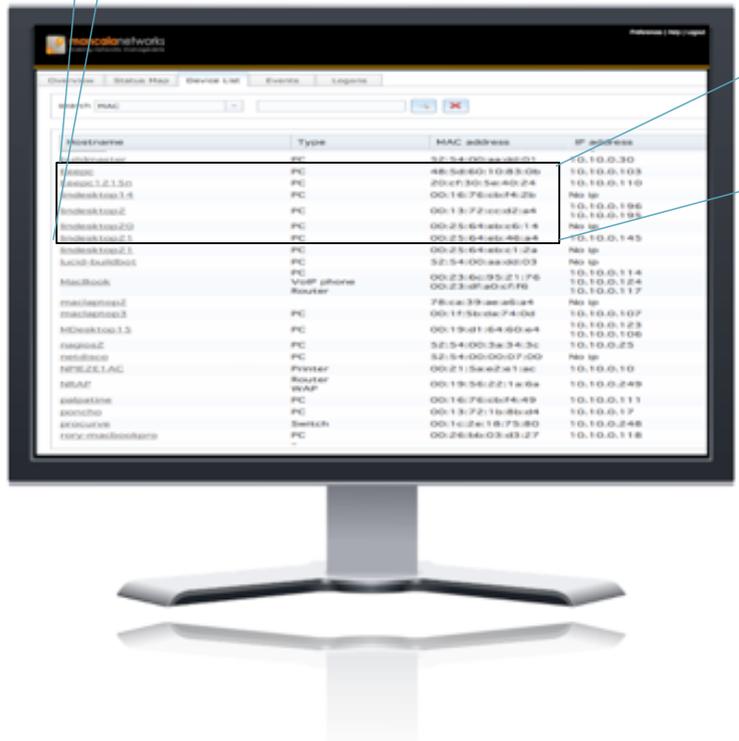

- 15 - 25% of devices on an enterprise network operate without an organization's knowledge, unknown to network and security managers.
- Management and security measures are applied irregularly

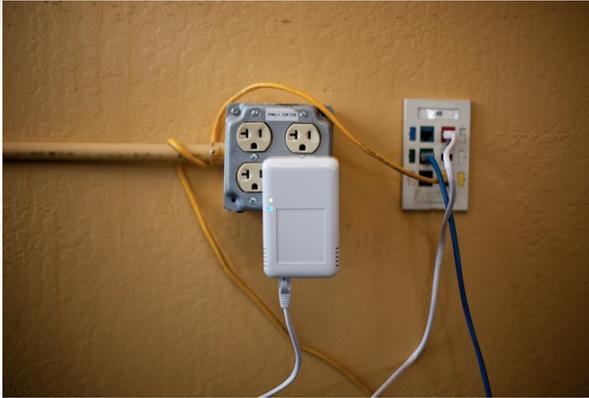

You can't secure what you can't see!

Contextual network visibility is key

Error	detect_duplicate_ip	00:24:81:00:00...	10.10.0.32

UBER APT - Can you detect it?

> **PwnPlug** (<http://www.pwnieexpress.com>)

- Wireless, wired, 3G interfaces
- Automatic 802.1X and NAC bypass functionality
- Out of band SSH access over 3G/GSM
- 16 GB storage
- Tunnels through application aware firewalls & IPS
- Unpingable & no listening ports in in stealth mode
- Preloaded with Ubuntu, Metasploit, SET, Fasttrack, SSLStrip, nmap, dnsniff, netcat, nikto, nbtscan, scapy, ettercap, JRE, Medusa, ...

Mancala Networks

The challenge

→ Solution: Network Controller

Architecture

Demonstration

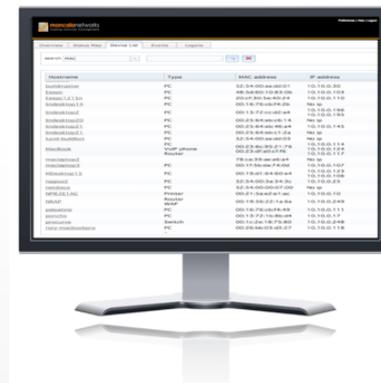

Network Controller

by **mancala**networks

Continuous network monitoring and control

real time, easy to deploy, modular, scalable

Optimizing the security investments of enterprise networks of any size

Boosts the security and manageability of IP networks for Enterprises and Managed Service Providers

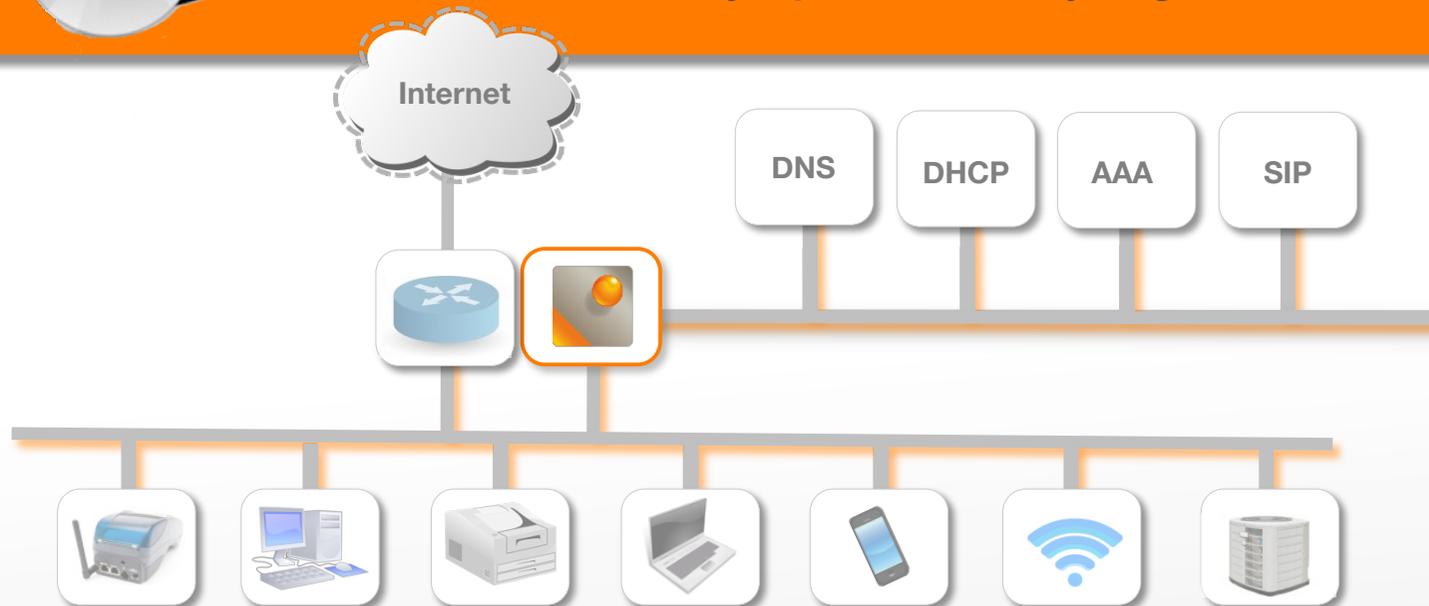

- > Complete **network visibility** including devices, users & locations
- > Real-time **security** for all device categories, including mobile devices & BYOD
- > Built-in service **automation** platform for IT organization and MSSP operational efficiency

Single solution

Multi-source network Scanner
Next-generation, context-aware NAC
Device aware IDS/IPS

- Pluggable with existing network Infrastructure and Services
- Orchestrated by a powerful Policy Engine

Patent pending EP 10306073.7, USA 13/240,299

> **Ensure 100% BYOD enrollment**

Harden MDM deployments by eliminating unknown devices in order to maximize your MDM investment

> **Optimize SIEM**

Provide additional log information regarding network context changes for evaluation & create real-time enforcement policies easily

> **Create a “Golden” CMDB**

Make sure that your asset management tools truly reflect the reality of your network infrastructure and eliminate rogue devices.

> **Target vulnerability assessment**

Evolve from a periodic, ineffective and reporting centric assessment strategy toward targeted, real-time assessment

Optimize existing security investments

Compatibility matrix

The Network Controller approach:

Simplify Migration Process

- Open Network Network  MAC Auth
- MAC Auth Network Network  802.1X

Give visibility on non migrated devices

Fine granularity for migration (up to switch port)

Administer once migrated

Without the Network Controller:

- Configure the switch port for 802.1X access
- The device(s) can no longer connect :(
- Configure the device(s) to perform 802.1X
- Repeat for each port... :(

A common strategy: Migrate all port and devices over a WE... Good luck !

Without the Network Controller:

A smarter alternative:

- Configure the switch port for 802.1X access and Mac Auth for the devices connected to that port.
- The device can still connect (better !)
- Configure the device(s) to perform 802.1X
- Remove Mac Auth for the device(s)
- Repeat for each port... :(

What if device was mis-configured ?

- Device Can no longer connect :(

INTERFACES

- Interface d'administration extensible et documentée (CLI)
- Interface graphique intuitive et unifiée (GUI)
- Connectivité aux sources de données les plus courantes (LDAP, SQL, Active Directory...)
- SDK/REST API

EXPLOITATION

- Administration à distance
- Découverte et inventaire temps réel
- Déploiement en deux phases sans impact
- Support de la virtualisation
- Information dynamique de l'administrateur

FLEXIBILITE

- Architecture modulaire évolutive
- Moteur de génération de rapport spécifique
- Paramétrage des politiques de sécurité
- Disponible en image logicielle ou préchargée sur un serveur (appliance)

MANAGEMENT

- Portail captif
- Services DNS, DHCP, RADIUS embarqués
- Traçabilité complète et exhaustive
- Mise en place sans agent

ROBUSTESSE

- Système d'exploitation éprouvé
- Module de Haute Disponibilité
- Délégation d'administration fine
- Gestion d'accès et contrôle d'utilisation
- Option de by-pass pour les Appliances

PERFORMANCE

- Fonctionnement garanti avec tous les fournisseurs respectant les normes*
- Testé avec plus de 1000 équipements connectés simultanément
- Supporte un débit de plus de 3000 requêtes à la seconde (v1.3)
- Capacité de gestion multisite (v.2)
